KEEP IN MIND

- Rest 90 s compounds, 60 s isolation. Shorter rest = more metabolic stress.
- Add weight only when you complete all reps with clean form.

- Run this for 6–12 weeks before increasing frequency or switching.
- Focus on the mind-muscle connection — feel the target muscle work.

UNIVERSAL RULES

- Warm up 5–10 min before every session. Cold muscles = injuries.
- Never sacrifice form for weight — ego lifting kills progress.
- Hydrate: minimum 3 L water per day on training days.
- Track macros. Nutrition is 70% of your results.
